Lg mobile switch stuck at 99

Try transferring data from iPhone to Galaxy S9 using the cable and smart switch. Transfer gets stuck at 99% and doesn't move for hours. Try several times without luck. Any ideas? -- A question that was published on the AndroidCentral Forum Samsung Smart Switch is a phone data transfer app developed by Samsung Company. It is designed to help users transfer data from other phones to Samsung phones. This is a useful app, but there are problems that occur from time to time. Many users report that Samsung Smart Switch takes a long time to transfer data. In this article, we offer some possible solutions to fix the Samsung Smart Switch, which is stuck with 99% problem. Part 1: Samsung Smart Switch Stuck and a Long Time, Why? Part 2: Samsung Smart Switch Backup Stuck when loading backup lists, How do I get it? Part 3: Samsung Smart Switch Stuck at 99%? Try the best alternative to Samsung Smart Switch! Part 1: Samsung Smart Switch Stuck and a Long Time, Why? Although Samsung Smart Switch is a very convenient app to transfer data from other phones to Samsung devices, it's such a pain when Samsung Smart Switch gets stuck at 99% or other numbers and doesn't make any progress. So why does Samsung Smart Switch stop the transfer in the middle of the process? Before we talk about the solutions, let's take a look at the possible reasons for this problem.* Improper installation on one of your phones could cause Samsung Smart Switch to not work or get stuck. * The USB cable or adapter is damaged. * The Wi-Fi function is not enabled on both phones or the Wi-Fi connection is poor. * Low battery on your devices. * The lack of space on the target phone. * There may be some compatibility issues with devices or the data you want to transfer. * There may be malware on one of the phones. * There is unreadable or corrupted data that will bring the transmission process to a standstill. Part 2: Samsung Smart Switch Backup Stuck when loading backup lists, How do I get it? To use the Samsung Smart Switch app to successfully transfer your phone data, there are a few things to watch out for.* Make sure your devices are supported by Smart Switch. (Here is the compatibility page) * The source phone should run Android 4.3 or later or iOS 5 or later. * Download the Samsung Smart Switch to your source and destination phones. * Make sure the target phone is a Samsung Galaxy phone. * If your source phone is an iPhone, make sure you trusted the Samsung phone on your iPhone. * Close the other apps on both devices so that content transfer is not interrupted. * Do not stop the process or quit the app in the middle of the broadcast. After verifying that you have used the Samsung Smart Switch correctly, try the following solutions to fix Samsung Smart Switch, which is stuck with 99% problem:Solution 1: Make sure the USB cable and port are workingCan check if there is any damage to your USB cable, USB port or USB adapter. To do this, you can try the USB cable that you can or use another viable USB cable to connect your phones. In addition, check if there is dirt in the USB port of your phone, use a dry cloth to clean it. Solution 2: Restart the Wi-Fi connection If you are using Wi-Fi to transfer phone data, you can restart the Wi-Fi function and try again. To do this, you can navigate to Setting > Wi-Fi and restart. Or you can simply drag the notification box down to re-enable Wi-Fi. Solution 3: Charge your phonesTo make sure a Samsung Smart Switch is working smoothly, make sure your phones have enough battery to perform the data transfer. If you are using Wi-Fi transfer mode, you can charge the devices during transmission so that the smart switch backup problem does not occur due to the low battery. Solution 4: Enter space on the target phone You can go to Settings > Memory to see if there is enough space on your target phone for the content you want to transfer. If there is not enough space on your device, you can free up internal space by deleting the unwanted data or by moving some items to a microSD card. Note that both devices should have at least 500 MB of free space in their internal storage for successful data transfer. Solution 5: Don't transfer all the data at onceTry not to transfer the total data at once. Transferring data, such as large-sized apps, often takes a long time. When transferring data, you can transfer one data type at a time. And if it's because of the corrupted data that causes Samsung Smart Switch to get stuck, you can find out what data is the cause by transferring it piece by piece. Solution 6: Clear the app's cache on phonesIf the Samsung Smart Switch takes a long time to transfer, you can try to clear the cache and remaining files of the app on both devices. To do this, go to Settings > Find Apps > and tap Smart Switch > Storage > Clear Cache. You can also tap Delete Data > OK to delete the app's data. Then restart the data transfer. This should fix most Samsung Smart Switch stuck problems. Solution 7: Install the Samsung Smart SwitchNewIf the Samsung Smart Switch is still stuck on the load backup lists after deleting the app cache and data, you can try removing and reinstalling the app on both devices. To do this, just go to Settings > Apps and uninstall Samsung Smart Switch, then download the app from the Google Play Store on both devices Solution 8: Start your devicesNew if Samsung Smart Switch remains at 99% problem after trying out all the above solutions, then you can restart your phones. Make sure you disconnect your phones before restarting them. Tip: Samsung Smart Switch isn't working properly? Find the fixes in the article Useful Tips to Make Samsung Smart Switch Not Working (Completed Solved). Part 3: Samsung Smart Switch Stuck at 99%? Try the best alternative to Samsung Smart Switch! Top 2 Buzzworthy Samsung to LG Transfer Approaches Samsung Smart Switch can transfer content from your old devices to a new Samsung phone in a wireless or wired way to help you easily help to the new Galaxy S9/S10 from Android, iPhone, Windows Phone and BlackBerry. It seems to be a perfect solution for transferring Samsung files until you can't let Smart Switch work on your devices. There are mainly 2 types of smart switch do not workproblems: connectivity problem and stability problem, that is, smart switch do not connect the device or the app gets stuck when transferring data. This article will provide a specific explanation for any issue and how Samsung Smart Switch will not work. If Samsung Smart Switch might not work on your devices in rare cases, or you're fed up with the app, there's a Smart Switch alternative: FonePaw DoTrans, which connects 2 devices simultaneously and migrates content from Android/iPhone/iPad to Samsung Galaxy or vice versa in a simple and stable way. Samsung Smart Switch does not connect to the device (or connection lost)The first problem you may have to work to work Samsung Smart Switch is to make Smart Switch connect to your devices. Here are the Samsung Smart Switch connection issues you may encounter and the solutions. Samsung Smart Switch on PC cannot connect to a mobile deviceIf you try to transfer content to your Galaxy phone via Samsung Smart Switch on PC/Mac, Smart Switch for PC or Mac may not be able to detect your Galaxy phone, iPhone, or Android devices. If you experience a similar problem, you can follow these steps. Make sure your devices meet the minimum system requirements: PC running Windows XP or later, Macs on Mac OS X 10.6 or later, Samsung devices running Android 4.3 or later, iPhone running iOS 4.2.1 and later. Make sure that the USB cable and USB port you are using are practical. Or switch to another cable or port to try. Select Media Device (MTP) as the USB connection option in your Samsung device. Restart the Smart Switch.Reinstall USB driver from Smart Switch. In the desktop application, click MORE > Reinstall Device Drivers to reinstall the driver. After that, restart your Samsung device and reconnect it to Samsung Smart Switch.Samsung Smart Switch connection lostSamsung Smart Switch on your Samsung phone sometimes say connection lost when it tries to detect an iPhone via a flash cable and a USB OTG adapter. If the connection is lost after several attempts, you can try: Make sure your iPhone is on iOS 5.0 and above; Use the original E flash cable and USB port that comes with your Samsung phone and iPhone; On your Samsung, clear cache from Smart Switch from Settings > Applications > Application Manager > > Smart Switch Restart both your Samsung and iOS devices; Reinstall Samsung Smart Switch; Switch to wireless transmission, which moves content from your iPhone to iCloud backups; Switch to Smart Switch for PC/Mac and restore iPhone data from your iTunes backup to your new Samsung device. The worst thing is that after receiving connection error when connecting to iPhone with cable, smart switch switch no iCloud backups or Internet connection will be lost when you try to use wireless transmission. If so, use FonePaw DoTrans, which allows you to connect both iPhone and Samsung devices to a computer and select data to transfer. Samsung Smart Switch continues to separate by installing Smart Switch Mobile on your old Galaxy device and the new Galaxy device, allowing you to wirelessly connect the two devices via high-frequency audio sent from the speaker of an old device to the microphone of the new device. If Smart Switch continues to disconnect, make sure that the following points are true: Your Galaxy devices are on Android 4.0 or later; The 2 devices should be placed side by side; The speaker of the old device is not covered and the 2 devices are not connected to headphones or Bluetooth headsets. If you still can't pair the 2 Galaxy devices over an audio connection, pair them manually by entering a PIN. Samsung Smart Switch plugSamsung Smart Switch can also get stuck at 99% or take a very long time in data transfer. When this happens, you can try the following tricks. If you are wirelessly transferring content through Smart Switch, unplug the cable and reconnect it to your device to try again. If Smart Switch gets stuck in wired transmission, try transmitting the data wirelessly. Make sure Smart Switch for Android is installed on your two devices and turn on Wi-Fi on both devices. Open the Smart Switch app and tap the wireless transmission. During data transfer, make sure that all other apps on both devices are closed so that smart switch transmission is not interrupted. If none of the tricks work for you, try Samsung Smart Switch for PC. Samsung Smart Switch does not transfer appsSamsung Smart Switch supports the transfer of apps and app data from Android to Galaxy Phone, but it cannot transfer all apps. For example, if your old galaxy phone is a Verizon phone and the new one isn't, those Verizon apps won't be transferred. And when content is transferred from the iPhone to the Galaxy device, apps aren't transferred because iOS apps are different from their Android versions. Smart Switch only transfers the app list from your iPhone to the Galaxy phone. You can tap Install to get the iOS version of the apps. Samsung Smart Switch Alternative: FonePaw DoTransDoTrans is a desktop transfer tool that can transfer photos, videos, audio, messages, contacts and more from iPhone, Android to Galaxy devices or vice versa. Unlike Smart Switch for PC, DoTrans allows you to connect multiple mobile devices simultaneously with the and select data to be transferred between the connected devices. This allows the tool to transfer data to Galaxy devices faster and more flexibly. more importantly, there will be no connection problems. Connect your old device (iPhone or Android) and the new Galaxy phone to your computer using USB cables. Select a category and select all the content you want to transfer. Click Export and select the target devices to begin the transfer. Do you still have Problem transferring content to Samsung devices? Leave your question below. Below.
